

Drone SAR System

PRESENTED BY GOTOLONDON

CONTENTS

BACKGROUND

- Mortality in MOB Situation

SUGGESTION

- MOB Detector
- Auto-search planner on ECDIS
- SAR DRONES SEARCH PERSON (15MIN)
- SAR Operation(Within half an hour)

CONCLUSION

GLOSSARY

Abbreviations & Acronyms	meaning
CSP	Commence Search Point
ECDIS	Electronic Chart Display and Information System
IAMSAR manual	International Aeronautical and Maritime Search And Rescue manual
IR camera	Infrared camera
MOB	Man Over Board
NM	Nautical Mile
OSC	On-Scene Coordinator
PA	Public Addresser
ROT	Rate Of Turn
SAR drone	Search And Rescue drone
SOLAS convention	Safety Of Life At Sea convention
USCG	United State Coast Guard

Term	Meaning
Datum	a standard position or level that measurements are taken from in geographic surveying
Doppler effect	the change in frequency or wavelength of a wave for an observer moving relative to its source
Hypothermia	their body temperature has become dangerously low as a result of being in severe cold for a long time.
Muster	they gather together in one place in order to take part in a military action
Penetration depth	a measure of how deep light or any electromagnetic radiation can penetrate into a material

BACKGROUND

· Mortality in MOB Situation

BACKGROUND

SUGGESTION

CONCLUSION

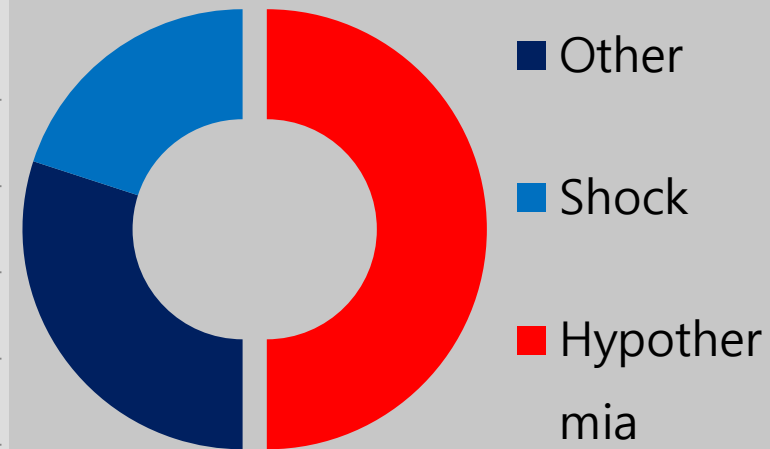

1) The death toll by MOB

2) Reason

Due to Hypothermia

BACKGROUND

Mortality in MOB Situation

Life saving appliance

These appliances are not utilitarian unless man overboard is detected immediately

Case.1

Case.2

Help

SUGGESTION

- MOB Detector
- Auto-search planner on ECDIS
- SAR DRONES SEARCH PERSON (15MIN)
- SAR Operation(Within half an hour)

BACKGROUND

- Goal: Grasp position of person overboard in 15minutes
Rescue within half an hour after falling accident.

SUGGESTION

CONCLUSION

Man-
overboard
Detector

Auto-
search
planner
on ECDIS

SAR
Drones
Search
person
(15min)

SAR
Operation
(Within
half an
hour)

CHECKPOINT

MOB DETECTOR

- Thermo-graphic camera(IR Camera)
- Motion recognizer
- Laser Sensor

AUTO-SEARCH PLANNER ON ECDIS

- Marking man-overboard position
- Computing datum(CSP)
- Calculating a Search Area

SAR DRONES SEARCH PERSON(15Min)

- Locate the person overboard
- Keep on positioning
- Prolong survival time

SAR OPERATION(30Min)

- Single turn
- Muster all crew
- Rescue Boat Stand-by

BACKGROUND

SUGGESTION

CONCLUSION

Man-
overboard
Detector

Auto-
search
planner
on ECDIS

SAR
Drones
Search
person
(15min)

SAR
Operation
(Within
half an
hour)

MOB Position

SUGGESTION

Details

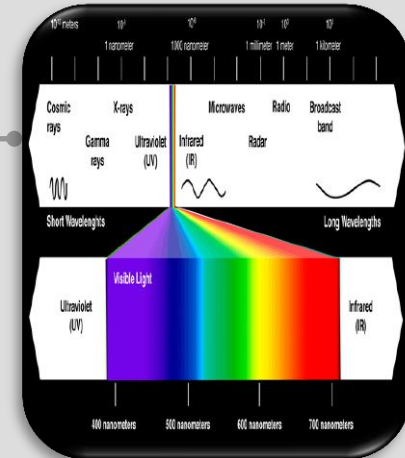

BACKGROUND

SUGGESTION

Infrared

: similar to light but has a longer wavelength, so we cannot see it without special equipment.

CONCLUSION

Motion

human motion sensor
be able to distinguish
human's motion from
non-human's motion

Laser

: a narrow beam of
concentrated light produced
by a special machine

SUGGESTION

Details

BACKGROUND

SUGGESTION

CONCLUSION

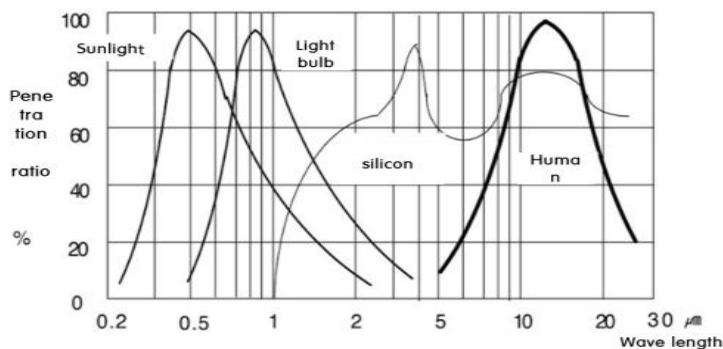

✓ Infrared and human falling
motion detecting camera

BACKGROUND

SUGGESTION

CONCLUSION

Sensing Infrared

Graph

Application example

Example. 1

Example. 2

BACKGROUND

SUGGESTION

CONCLUSION

Sensing Motion

Computer vision-based
human motion

Histograms of Oriented
Gradients

Application example

Example.1

Example.2

BACKGROUND

SUGGESTION

CONCLUSION

Sensing speed

Doppler Effect

Principle

Application example

Example. 1

Example. 2

$$v = \sqrt{2gh}$$

(Where v = velocity , g = gravitational acceleration , h = freeboard height)

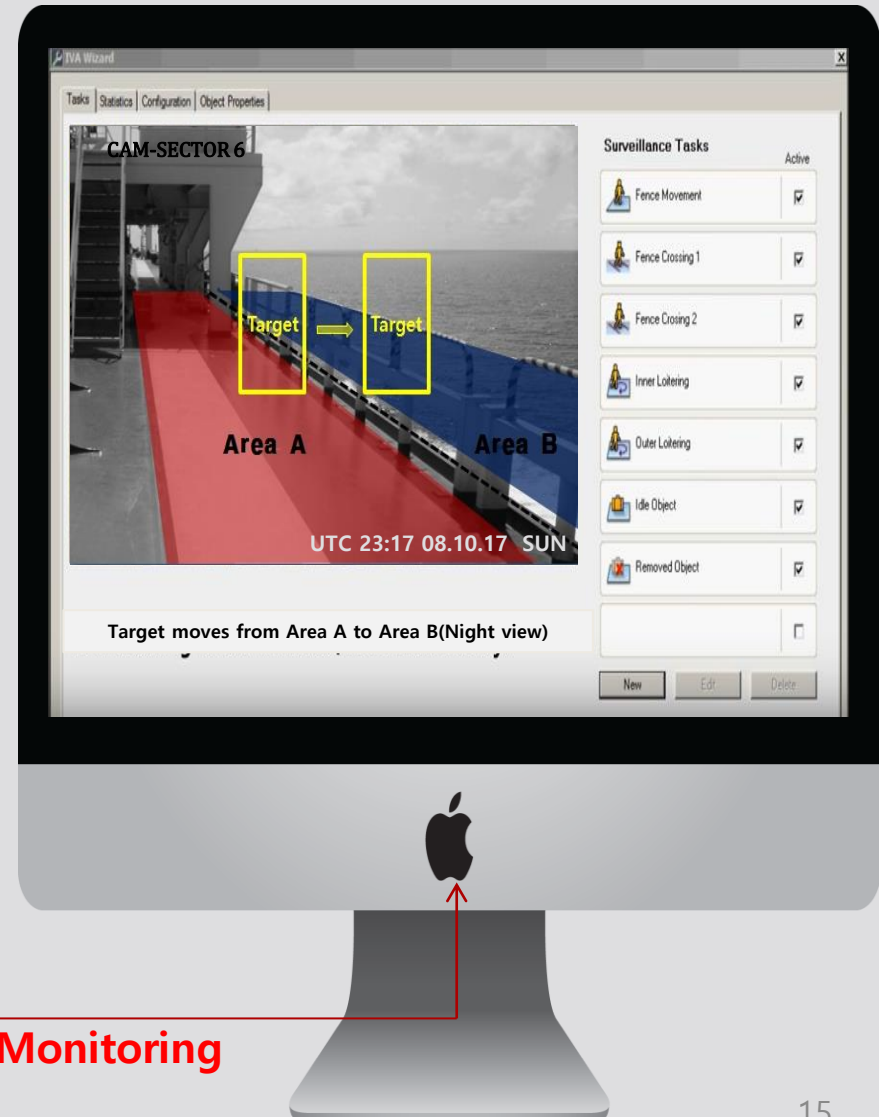

SUGGESTION

Details

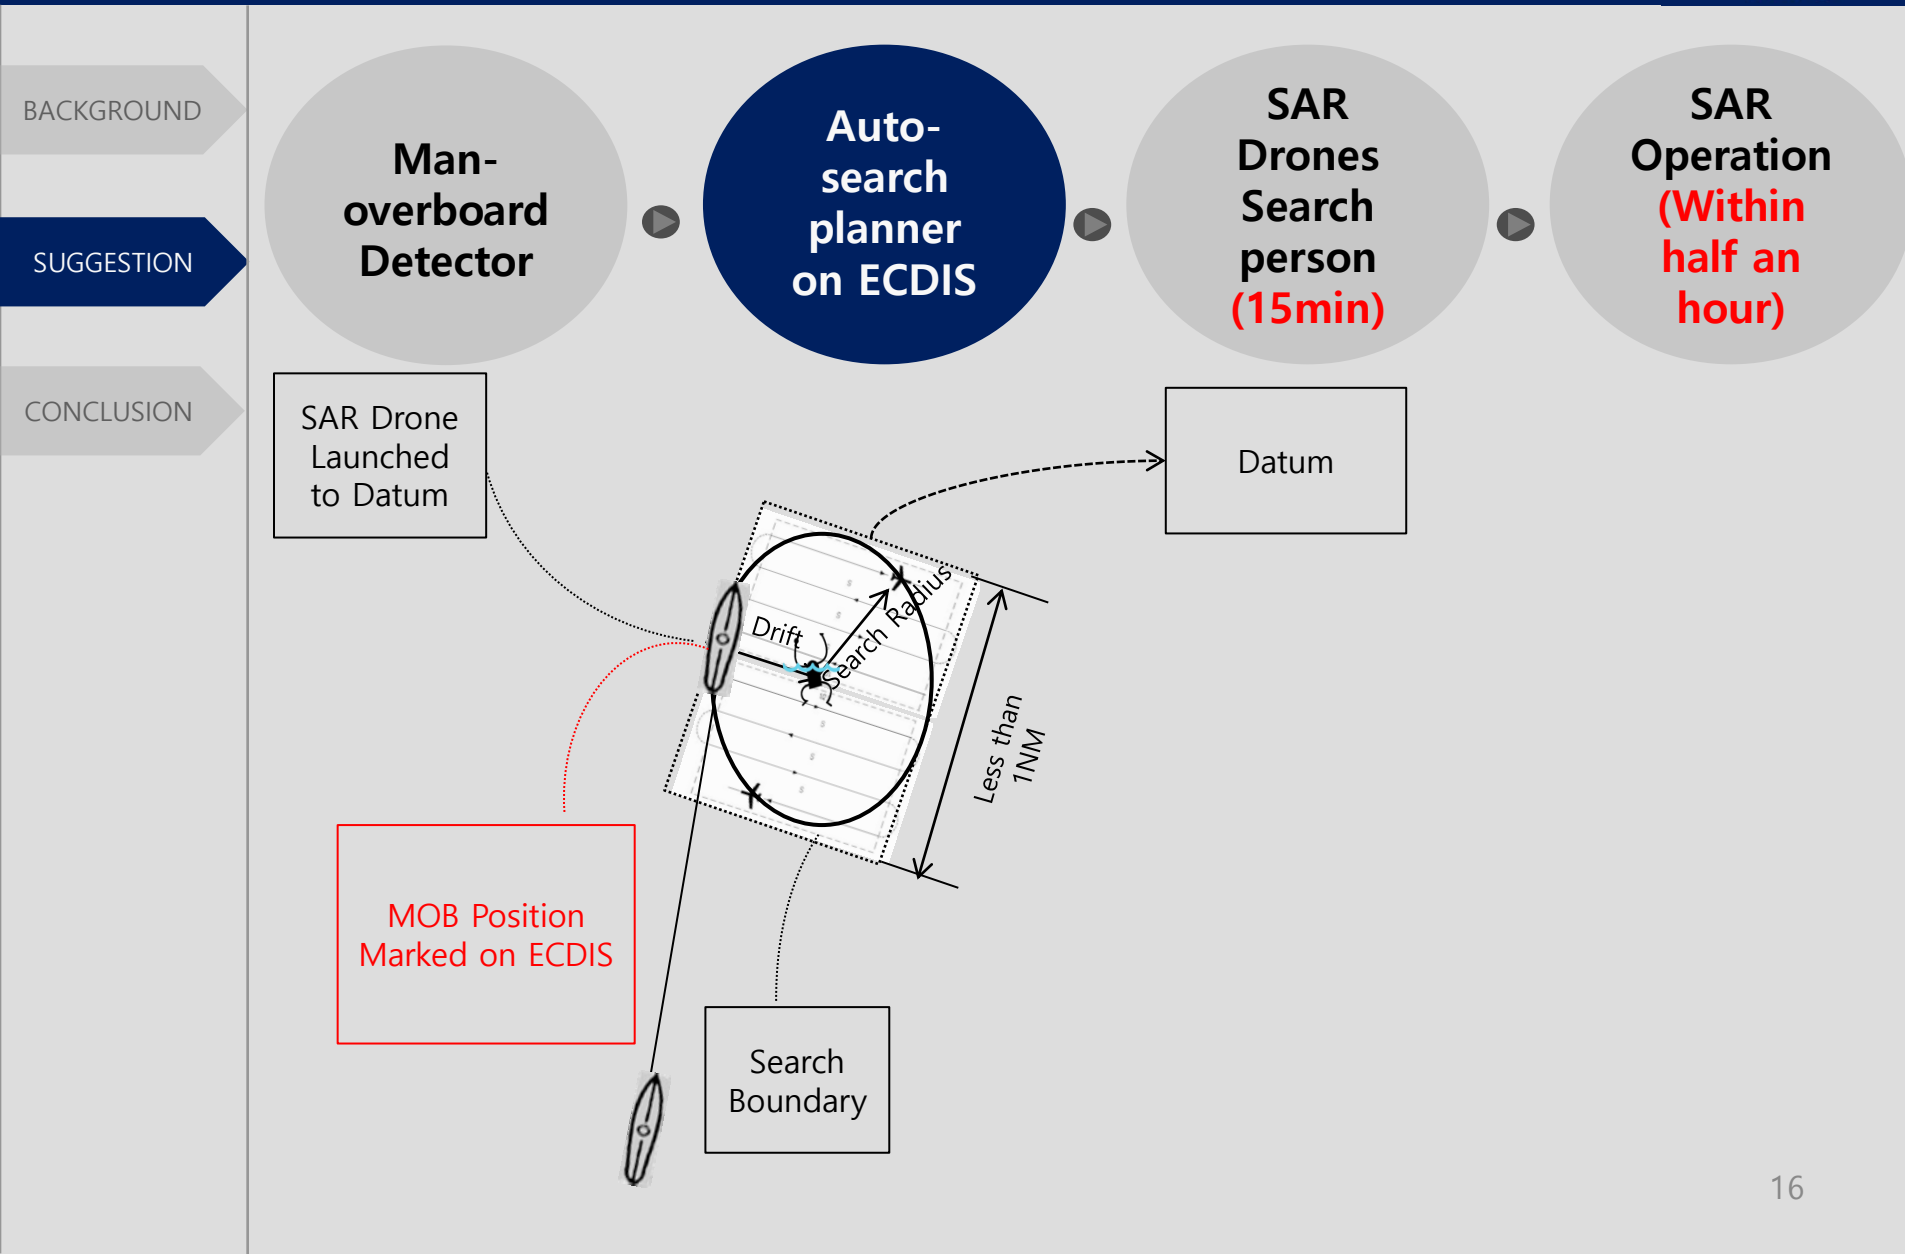

BACKGROUND

SUGGESTION

CONCLUSION

Monitoring

SUGGESTION Details

BACKGROUND

SUGGESTION

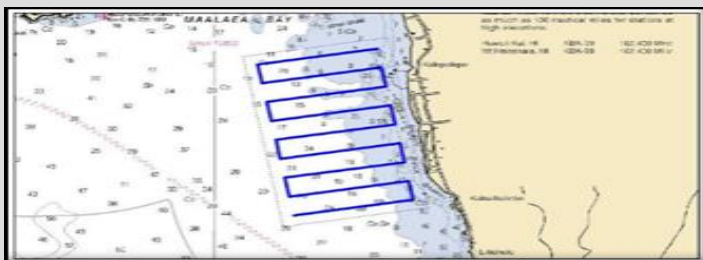

CONCLUSION

Marking man-overboard position

Computing the datum

Calculating a Search Area

The sensing system gives a signal to ECDIS so that it can mark MOB Position on the chart promptly.

According to IAMSAR Section 3

On scene co-ordination
Planning and conducting the search Datum

At the same time, it determines which search pattern is the best way to find the person overboard.

BACKGROUND

SUGGESTION

CONCLUSION

Man-overboard Detector

Auto-search planner on ECDIS

SAR Drones Search person (15min)

SAR Operation (Within half an hour)

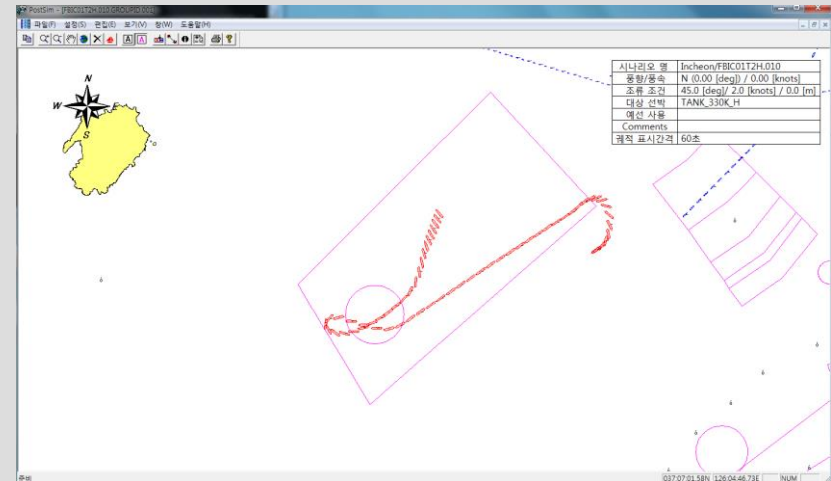

SAR Drone Launched to Datum

CSP :Commence Search Point

0.5N
M

MOB Position Marked on ECDIS

Search Bound ary

SUGGESTION

Details

BACKGROUND

Man-overboard Detector

Auto-search planner on ECDIS

SAR Drones Search person (15min)

SAR Operation (Within half an hour)

SUGGESTION

CONCLUSION

"Comprehensive understanding of the situation" by analyzing monitoring records is required

Single turn

SAR Operation

: Recovery of the person in the water

Muster all crew By announcing(PA)

Everyone on-board?

No

Yes

"Ship should be heading for the datum"

Rescue Boat Stand-by

Finish Mustering

SUGGESTION

Details

BACKGROUND

SUGGESTION

CONCLUSION

BACKGROUND

SUGGESTION

CONCLUSION

THE IAMSAR MANUAL VOLUME III SEARCH THE AREA

A_t = Total Search Area
 N = Number of SAR Drone
 S = Swipe Width (Track Spacing)
 V = Search Speed

T = Search Time
 H = Flight Altitude
 θ_{FOV} = IR Field Of View Angle
 D_{min} = minimum detectable range

$$A_t = N \times S \times V \times T$$

$$S = 2 D_{min} \cdot \sin \frac{\theta_{FOV}}{2}$$

$$H = D_{min} \cdot \cos \frac{\theta_{FOV}}{2}$$

Set Values

$$N = 2$$

$$V = 40 \text{Knots}$$

$$T = 15 \text{min} (0.25 \text{ Hour})$$

$$S \geq 100M$$

EQUIPMENT SPECIFICATION

BACKGROUND

SUGGESTION

CONCLUSION

Infrared Camera

Model : Dinion IP
Imager 9000HD
Cost : \$ 3,000 × 14EA
= \$ 42,000

Base Drone

Model : DJI M600
Cost : \$ 5,500 × 2EA
= \$ 11,000

Speed sensor for falling object

Model : M0596
Cost : \$ 2,000 × 14EA
= \$ 28,000

Thermo-graphic Camera

Model : FLIR – BHM
Cost : \$ 6,000 × 2EA
= \$ 12,000

Central Computer Model

undetermined
Cost : \$ 2,000 × 1EA

Life buoy ring

Model : 30" USCG/SOLAS
Orange Life Ring Buoy for use on
Bridge Wing with Reflective Tape
Cost : \$ 200 × 2EA =
\$ 400
(Including a Life ring-
releaser)

CONCLUSION

1) Amendment in SOLAS

Title	SOLAS 2016 Amend / Chapter III / Reg. 3
Effective Date	1/1/2020

Regulation 3

Definitions

For the purpose of this chapter, unless expressly provided otherwise:

- .
- .
- .
- .
- .

26 "Detecting sensor" is a sensor which can detects whatever Man-overboard occurred or not.

27 "Infrared and human falling motion detecting camera" is a camera which detects infrared emitted by human and human falling motion.

28 "Falling velocity sensor" is a sensor which can measure velocity of moving object.

29 "Search and Resuec drone" is a drone whose main function is to locate persons overboard during Search and rescue operation

Insert clauses in regulation 3 in chapter 3

26 "Detecting sensor" is a sensor which can detects whatever Man-overboard occurred or not.

27 "Infrared and human falling motion detecting camera" is a camera which detects infrared emitted by human and human falling motion.

28 "Falling velocity sensor" is a sensor which can measure velocity of moving object.

29 "Search and Resuec drone" is a drone whose main function is to locate persons overboard during Search and rescue operation

2) Amendment in LSA code

Title	LSA 18 Amend / CHAPTER VII / 7.3
Effective Date	11/10/2018
	D-GAR system

7.3 Man-overboard sensing system

7.3.1 Regulation 7.3 applies to all passenger ships and to all cargo ships of 500 gross tonnage and upwards.

7.3.2 Detecting Sensor

7.3.2.1 Infrared and human falling motion detecting camera shall be at least installed as the number detecting all around vessel.

7.3.2.2 falling velocity sensor shall be at least installed as the number detecting all around vessel

Title	LSA 18 Amend / CHAPTER VII / 7.3
Effective Date	11/10/2018
	D-GAR system

7.4 SAR Drone System

7.4.1 Regulation 7.4 applies to all passenger ships and to all cargo ships of 500 gross tonnage and upwards

7.4.2 Search and Rescue Drone with equipped thermo-graphic camera

7.4.2.1 Search and Rescue drone shall

.1 be launched automatically when Man-overboard is detected by the sensor in a state of continuous readiness

.2 be launched without interference of cargo and structure of ship

.3 be at least faster than 40 knots in windless weather condition

.4 be capable of being operated longer than an hour above 40 knots

.5 be equipped with a releasing device to drop lifebuoy to a drowner

7.4.2.2 Minimum detectable range of Thermo-graphic camera shall be longer than 130m by standard of view angle 42°.

Insert regulations in chapter 7

7.3.1 Regulation 7.3 applies to all passenger ships and to all cargo ships of 500 gross tonnage and upwards.

7.3.2 Detecting Sensor

7.3.2.1 A sufficient number of infrared and human falling motion detecting camera shall be installed in order to cover all the boundary of the vessel.

7.3.2.2 A sufficient number of falling velocity sensor shall be installed in order to cover all boundary of the vessel

7.4.2.2 Minimum detectable range of Thermo-graphic camera shall be longer than 130m by standard of the field of view angle 42°.

2) Amendment in IAMSAR

Insert 2.1.1 in the chapter

Person overboard

Immediate action

- The persons overboard is noticed from the bridge action is taken immediately

Delayed action

- The person is reported to the bridge by an eyewitness and action is initiated with some delay.

Person-missing action

- The person is reported to the bridge as missing.

Insert "Initial Action by SAR Drone"

Initial Action

1. Throw a life-ring over the side as close to the person as possible
2. Sound three prolonged blast of ship's whistle, hail "person overboard"
3. Commence recovery maneuver as indicated below.
4. Note position, wind speed & direction, time.
5. Inform master of vessel and engine-room
6. Post lookouts to keep the person in sight.
7. Set off dye marker or smoke flare.
8. Inform radio operator, keep updated on position.
9. Stand by engines.
10. Prepare lifeboat for possible launching
